# REPORT OF THE TRUSTEES.

**T**HANKS to the generosity of friends a booklet, descriptive of the Hospital since its foundation and the re-building from 1929 to 1937, is being sent to all subscribers.

This Report, therefore, is but a brief outline of the activities of the past year.

The Coronation of their Majesties The King and Queen was fittingly celebrated both at Alton and the Seaside Branch at Hayling Island. All associated with the Hospital will remember with pride the visit of King George and Queen Elizabeth when they were Duke and Duchess of York in 1923. Souvenirs were presented to all the patients, and through the kindness of the British Hospitals Association and the generosity of the Philco Radio Corporation, Souvenir Programmes were also presented to the patients and the College boys.

In June last the rebuilt Hospital was formally opened by His Royal Highness The Duke of Kent.

Few Hospitals have been so fortunate in Royal patronage as that founded by Sir William Treloar, and the visit of the Duke of Kent was but a further mark of Royal sympathy with any cause that has for its object the restoration to health of the suffering.

No higher tribute to the work of the Hospital can be expressed than by quoting from the speech of His Royal Highness at the opening of the Hospital :—

“ I am very glad to have been able to come to Alton to-day to open the new buildings of this great hospital. During the last few years I have visited a great number of hospitals, and have

been very impressed by the high degree of efficiency which I have seen. The modern hospital is no longer a building adapted to the needs of treating the sick, but a building scientifically planned, in which every detail has received the most careful consideration, both from the medical and architectural standpoint. The new buildings of the Lord Mayor Treloar Hospital, as you will see, entirely conform to this very high standard. They are a worthy shell for the fine work that has been done by the Hospital since it was founded. There is, I think, no feature of the civilisation of the twentieth century more distressing than the amount of suffering among children. The enormous advance in medical science and medical skill has saved the lives of countless thousands of small children who would not have survived the hardships of former times. This is a great achievement, but it is only a half measure, because until we can help all these children to lead a normal life, unhampered by illness or suffering, we have not justified our progress. I should like to think that in years to come a Hospital of this nature will be superfluous. If I am thinking too far ahead, it is because I feel sure that all of you who have worked so hard for this Hospital must feel, as I do, that it is our first duty to look after our children, and as we do not want them to suffer, so we want to prevent other children from suffering too."

The Trustees feel they are voicing the wishes of all friends of the Hospital in expressing to His Royal Highness humble and grateful thanks for his encouragement.

The Trustees are further happy to report that it was possible to revive "Hampshire Day" during the past year, when the Lord Lieutenant of the County, Lord Mottistone, and distinguished representatives of Public Authorities visited the Hospital. Not only in Hampshire but throughout the Country Public Authorities co-operate cordially with the Hospital in its efforts to cure and prevent crippling defects, so saving future citizens from being a charge on Public funds.

Opportunity was taken on this day to formally present to the Hospital "The News Chronicle" Wireless Installation. This Installation, consisting of twenty loud speakers throughout the

Hospital, is an endless source of pleasure to the children and particularly helpful in education as referred to in the School Report. The Trustees gratefully reiterate their thanks to Mr. B. F. Crosfield and the "News Chronicle" Wireless Fund.

There have been many visits of distinguished medical and scientific bodies and the Trustees are always most happy that the experience gained at Alton should be at the disposal of those interested in child welfare.

Financial support has been well maintained during the year and the Trustees cannot adequately express their appreciation of the splendid help received throughout the difficult years of re-building; help which has ensured the Hospital being carried on to the limit of its capacity and the new buildings erected without incurring debt.

In this direction the value of the work of the Queen Alexandra League cannot be over emphasised. Local Honorary Secretaries throughout the country have continued their splendid collections, and in addition to the annual contribution of £7,500 to the maintenance fund of the Hospital have contributed substantially to the re-building, and it may be frankly stated the work could not have been maintained without such help. The Trustees welcome the opportunity of once more expressing their grateful thanks to and deep appreciation of the fine work of, the Vice-Presidents, Companions, and Local Honorary Secretaries of the League.

Very generous assistance has once more been given through the medium of the Stock Exchange *v.* London Banks Football Match. £750 was received as a result of the Match this year. This is another record result, and grateful thanks are due to the organisers and especially to the Honorary Treasurers. The Trustees also take the opportunity of again expressing their indebtedness to the Directors of the Arsenal Football Club for their valued help.

The Trustees refer with particular pleasure to contributions received towards the re-building from the College Old Boys' Association. No more practical expression of appreciation could be offered than financial help from those who received training in the College (and many treatment in the Hospital before training),

and a tablet has been placed in the Main Hall of the Silver Jubilee Treatment Centre commemorating the gifts.

Expenditure during the past year calls for little comment beyond the heavy call for re-building and certain capital expenditure on existing plant at Alton and the Seaside Branch at Hayling Island.

During the year the change over of electric voltage at Alton was completed, and at Hayling electricity supply became available from the Portsmouth Corporation Electricity Department. It was therefore decided to do away with the old generating plant at the Hospital which was proving somewhat costly on account of continual repairs. The change over necessitated rewiring the whole of the Hospital and Staff Houses and opportunity was taken to arrange for very necessary repairs and re-decorations.

From the Medical Report it will be noted that all the beds in the Hospital have been in full occupation throughout the year and the attention of subscribers is particularly drawn to the greater facilities that are now available for the treatment of patients by the Silver Jubilee Treatment Centre, which was taken into use on 23rd December.

The varying types of patients now received rendered necessary the appointment of a further Consulting Orthopædic Surgeon and the Trustees are glad to be able to report that Professor Hey Groves, D.Sc., M.D., M.S., F.R.C.S., has joined the Consulting Staff. Dr. John T. Hunter, who has kindly given his services to the Hospital for some little time past, has been appointed Honorary Anæsthetist to the Hospital.

The Trustees deeply regret to record the death of Mr. T. H. Just, Consulting Ear, Nose and Throat Surgeon, who had given valuable services to the Hospital for some years past. Mr. N. A. Jory, F.R.C.S., has been good enough to accept the vacant post.

Owing to pressure of work in other directions Mr. J. H. Doggart, Consulting Ophthalmic Surgeon, has resigned, and Mr. R. Foster Moore, F.R.C.S., has been appointed in his place.

The Trustees are also happy to report that Sir William Willcox, M.D., has accepted an invitation to join the Executive Committee of the Honorary Medical Board.

The Trustees tender very sincere and cordial thanks to the Honorary Medical Board and to the Medical Staff for splendid services rendered, and also gladly acknowledge the good work of the Nursing Staff.

The Domestic Staff have now been provided with excellent living accommodation, the newly built Domestic Block having been taken into occupation on 3rd March.

Good progress is being made with the new Night Nurses' Quarters, which it is hoped will be occupied at no distant date.

The work of the School and the College has continued on normal lines.

Reference was made at the opening of the Hospital to the fact that the College in comparison with the Hospital is in a somewhat primitive condition, and now that the reconstruction of the Hospital is practically completed the Trustees feel it is essential to seriously consider the re-building and possible extension of the College in order to provide for the training of crippled girls. This proposal may be the subject of a special report.

To prevent crippling defects and ensure the physical fitness of the rising generation is the Hospital's ideal, but, unfortunately, there must always be some so crippled that special training is essential to equip them to be self-supporting.

Most cordial thanks are expressed to everyone who has assisted the work at Alton in any way—it is not possible to mention all by name in a brief report. The Hospital is a record of achievement and the children in the Wards a living argument for continued help.

The Trustees warmly invite subscribers to visit "The Happy Hospital" at Alton, and the experience thus gained will be the most practical thanks.

FREDERICK LAWSON, *Chairman.*

H. B. HARPER, *Secretary.*

# MEDICAL REPORT

FROM APRIL 1ST, 1936, to MARCH 31ST,  
1937.

THE year under review ranks as one of the most important in the history of the Hospital as it was during this period that the new Silver Jubilee Treatment Centre was completed and occupied. It had been my intention to describe this building and its equipment fully in this Report but its importance is such that a special illustrated Booklet is being prepared to commemorate its completion and to that I would refer subscribers and others interested.

The value of this new centre cannot be too strongly emphasised. It affords us greatly increased facilities for conducting the essential work of treatment and is proving and will continue to prove of inestimable help to our child patients.

## SURGICAL TUBERCULOSIS

As indicated in my last report, while conservative treatment is the treatment of choice in surgical tuberculosis, operative methods designed on conservative lines are increasingly employed in the terminal manifestations of the disease. The deformity resulting from tuberculous disease of the hip-joint having been corrected, the hip is frequently left imperfectly fixed by fibrous ankylosis. While in many cases temporary provision of a well fitting celluloid splint will prevent late onset of deformity, in some cases this is not sufficient. It is then usual to fix the joint (arthrodesis) if deformity has not arisen and so prevent it arising, but in the presence of deformity this deformity may be corrected by some form of osteotomy of the femur with or without arthrodesis of the joint.

In tuberculous disease of the spine without deformity or with deformity corrected during treatment, the subsequent provision of a celluloid jacket is often all that is needed. In patients with poor dorsal musculature subsequent deformity may arise and that may be prevented or arrested in many cases by fusing or grafting the affected

vertebræ. It will be noted that these are conservative operations, not attacking the diseased tissues, but designed solely as orthopædic measures to prevent onset or increase of deformity subsequent to and consequent from earlier active tuberculous processes. It is not our habit to undertake these operations early in the course of the disease but as a final measure to stabilise the affected bones and joints. While there is definite decrease in the incidence of bone and joint tuberculosis there appears to be a relative increase in the glandular forms, particularly abdominal. The latter especially may be due to earlier and better diagnosis and this is a matter for congratulation. Early diagnosis combined with efficient treatment must be of considerable value in limiting the spread of the infection to other and perhaps more dangerous regions of the body.

## HAYLING ISLAND

The popularity of the Marine branch of the Hospital is maintained and cases likely to benefit by a stay at the seaside greatly appreciate the facilities afforded there. 251 transfers were made to and from Hayling during the year.

## X-RAY DEPARTMENT

The new X-Ray Department is in full working order and admirable x-rays are now taken. Such radiograms are indispensable in a hospital of this type both as aids to diagnosis and for information relative to treatment.

The number of x-rays taken during the year was 1,398.

## LIGHT TREATMENT

## ORTHOPÆDIC AND PLASTIC SURGERY

Work amongst non-tuberculous cases continues to increase both in variety and in quantity.

As regards the patients requiring in-patient treatment, the number of cases has increased by 38 on last year's total, bringing this year's total for non-tuberculous cases under treatment in the Hospital to 274, and the number of operations performed (excluding minor operations) has increased by 92, bringing the total number of operations performed to 423. When it is borne in mind that we had to record a similar increase last year it will be realised that this Department of the Hospital is a rapidly growing one.

In this Department this year, however, I think one side of the work I might particularly stress is that done in the Out-patient Clinics served by the Hospital. Including the recently started Isle of Wight Clinic, which is not in this year's statistics, there are now 10 of these Clinics.

The amount of work undertaken at these Clinics, as will be seen from the subjoined tables, is becoming increasingly large, and is meeting, we believe, a very real need. A very satisfactory increase

in the number of cases seen and treated furthermore demonstrates that this service is being increasingly appreciated by parents and doctors alike. The total of 4,137 consultations, an increase of approximately 1,000 over the previous year, and of 14,842 remedial exercise and massage treatments given, an approximate increase of 4,000, are impressive.

A great part of the work may be described as "prophylactic." Through Welfare Centres, School Medical Inspection, etc., it is aimed to detect early orthopædic and postural defects and send the cases to the Clinics for advice and treatment before serious deformity or disability has developed. Sometimes admission to the Hospital is necessary, but frequently adequate treatment can be prescribed for the child as an out-patient. Included in the latter are a very large number of postural defects easily correctible in early life but giving rise to and predisposing towards much unfitness in later life if not treated. The importance not only of treatment of these conditions but of careful examination of all children of school age in order that such conditions can be detected at an age when treatment can be effective is now realised. Treatment principally consists of graduated, remedial and re-educational exercises, etc., together with the supply of such apparatus as may be required. This apparatus is made and supplied through the Hospital Surgical Appliance Department. Of the cases that are admitted to the Hospital from the Clinics the same may be said. Good results from orthopædic treatment can only be obtained if effective treatment is instituted early in life; e.g., in such cases as congenital dislocation of the hip and congenital club-foot, to mention two common conditions only.

Five acute cases of anterior poliomyelitis (infantile paralysis) admitted into our Isolation Ward by arrangement with the Hampshire County Council, in the first few days of the disease illustrate a similar principle. These cases have all done extremely well and we attribute this very largely to careful splinting and skilful nursing from the first two or three weeks of the disease. Too often such cases do not receive any orthopædic treatment until several weeks or more after the onset of the paralysis, by which time deformity may have developed and the paralysed muscle become so over-stretched that future recovery may be impossible.

The number of cases treated by our consultant plastic surgeon has continued to increase. This type of case seems to fare particularly well in an open-air Hospital such as this. We have been specially pleased with results in certain cleft palate cases; notably in exceptionally difficult cases, some of which had had several operations elsewhere.

# REPORT OF PATHOLOGIST

APRIL, 5TH 1936, TO APRIL 5TH, 1937

The routine pathological work has been carried out at Lord Mayor Treloar's Hospital, and at the Sir William Dunn School of Pathology, Oxford. The work has been greatly facilitated by the provision of an excellent laboratory in the Silver Jubilee Treatment Block, and it is now possible to do much of the work at Alton, which could not be done in the old laboratory. All work involving animal inoculation must be done at Oxford, but much of the bacteriological and biochemical can be done at the hospital.

In addition to the routine work done by the Resident Medical Officers, the following examinations were carried out during the year.

## *Haematological.*

- 39 complete blood counts.
- 18 white cell and differential counts.
- 50 sedimentation tests.
- 1 fragility test.
- 8 blood grouping.

## *Serological.*

- 19 Sigma reactions.
- 17 agglutination tests.

## *Histological.*

- 9 tissues.

## *Chemical.*

- 31 blood sugar estimations.
- 14 blood urea estimations.
- 15 urine urea estimations.
- 3 urea clearance tests.
- 1 faecal fat analysis.
- 2 urinary calculi analysis.
- 30 Triboulet tests.
- 1 blood phosphorous.
- 1 blood calcium.
- 1 water analysis.

## *Bacteriological.*

- 18 pus examinations for *B. tuberculosis*.
- 21 pus examinations for other organisms.
- 25 urine examinations for *B. tuberculosis*.
- 97 urine examinations for other organisms.
- 7 tissues for culture.
- 59 faeces cultures.
- 230 swabs examined for *B. diphtheriae*.
- 13 diphtheria virulence tests.
- 1 blood culture.
- 7 miscellaneous.
- 3 vaccines prepared by pathogen selection method.

## DIPHTHERIA IMMUNISATION.

The immunisation of patients and staff against diphtheria has been a routine procedure during the last two years, and the results have been satisfactory. A few cases of diphtheria have developed amongst the patients, but these have all been of a mild type, and have responded promptly to treatment. The response to immunisation is naturally variable, and a small percentage of individuals fail to develop the required degree of immunity to prevent infection when exposed to virulent organisms. These require a longer course of immunisation to develop immunity, and are susceptible during the early stages of immunisation. Of the new patients, many are susceptible, and the process of immunisation requires a few weeks during which there is a danger of infection. Other patients, when admitted, are found to be harbouring virulent organisms in nasal or aural discharges. These patients and the occasional healthy carriers provide the source of infection. Arrangements have been made to give patients who are admitted through certain clinics a preliminary dose of alum precipitated toxoid before admission. This procedure will reduce the time during which they remain susceptible after admission.

Sporadic cases of diphtheria will of course continue to arise until the general immunisation of the population at a very early age is universally adopted—and it seems highly improbable that this will be done in the near future. However, the hospital population may confidently be considered free from any danger of a diphtheria epidemic.

## DYSENTERY.

A small outbreak of dysentery occurred in Portsmouth Block at the end of May, 1936. Stool specimens from the first five patients were sent to me immediately for examination. Dysentery bacilli of the Sonne type were found in these. Strict precautions were taken at once to limit the spread of the infection, and only seven more cases, including one nurse, appeared. Stools from these patients were examined at intervals, and Sonne's dysentery bacillus was found in 11 of the 12 cases, on at least one occasion. The examinations were continued until two or more consecutive examinations gave negative results. The organism was still found in the stools long after the clinical signs had disappeared. Seven of the cases were still excreting dysentery bacilli after one month, and one of these continued to excrete the organisms for another fortnight.

The origin of this small epidemic was not found. Seventeen members of the nursing and domestic staff who had been in contact with the patients before the outbreak were examined for agglutinins

against the organism ; only one of these gave an abnormally high titre. Stool specimens of this nurse were repeatedly examined, but no dysentery bacilli were found.

The Sonne type of dysentery is probably much more prevalent in this country than is generally recognised. The disease is usually not very severe, nor of long duration, and many cases which are diagnosed as simple diarrhoea might be found to be due to Sonne's bacillus if a bacteriological examination were made. A small proportion of such cases doubtless remain carriers of the organism long after the attack is forgotten, and thus the infection is spread.

A much more extensive epidemic of Sonne's type of dysentery occurred in Block 4 in November, 1933. Since that time at least two epidemics of this disease occurring in children's hospitals have been reported in the medical press.

### THE NEW LABORATORY.

The new laboratory consists of two rooms in the Silver Jubilee Treatment Block. This provides ample accommodation for the pathological work of the hospital. A few notes on the design and construction may be of interest.

The walls are covered to a height of 5 feet with white glazed tiles. The floors are covered with rubber. The floors and walls can thus be easily washed and kept free of dust—a most important point for bacteriological work. The benches are of teak, and are supported on cantilevers. Supplies of hot and cold water, gas, electric light and power, and steam have been made available at various points in the laboratory so that various types of apparatus can be installed as the need arises without any further alterations.

The equipment is not yet complete, but the apparatus essential at the moment has been installed. An electric centrifuge of the hanging type, to eliminate vibration, is fixed to a wall bracket. The incubator has been transferred from the old laboratory. Some urgently needed chemical apparatus has been provided, and it is hoped that some other essential apparatus will shortly be available.

### REPORT OF DENTAL SURGEON

This year 384 children were examined on admission, and of these 25·6 per cent. needed no dental treatment. This shows a slightly higher percentage of children needing treatment as compared with last year and is probably due to the variation each year in the number of children admitted of school age who have received previous dental treatment.

There has been close collaboration with the plastic surgeon in the making of dental splints and obturators for children treated for cleft palate, and orthodontic work has been continued on patients suffering from Still's disease and other conditions.

Following is an analysis of the year's work :

	Ortho- pædic.	TB	College	Staff	Total
Permanent fillings .. ..	265	343	135	4	747
Temporary fillings .. ..	57	44	22	11	134

## RESEARCH.

Very thorough investigation into the mental activity and intelligence of crippled children has commenced and is being continued by Dr. Marum. It is of educational importance and individual interest to study the mental reaction of these children to their environment and physical disabilities and valuable observations have been made and are being continued which it would appear are likely to have practical significance when analysed and completed.

I tender grateful thanks to the Trustees of the Hospital for their sympathy and encouragement, to the Honorary Medical Board for its ever-increasing interest in the work of the Hospital, and for the personal help so frequently and generously given, and to the Resident Medical Officers, Matron and Nursing Staff, for their loyal and devoted services.

H. J. GAUVAIN,

*Medical Superintendent.*

## MEDICAL STATISTICS, 1936-1937.

**TABLE I.—Statistics of Patients treated since the opening of the Hospital.**

## HOSPITAL SCHOOL

WITH a staff of teachers keenly interested in the welfare of the children, and who bring to their work the right kind of sympathy it has been possible to continue the good work with the children.

It can be truly said that the children are responsive, happy, and friendly and it is this fact that immediately strikes the visitor.

Steady improvement can be seen in the mental development of many children who have lacked early training, and this gives as much, if not more, gratification than the development of the more fortunate child.

It has also been possible to advance the studies of those hoping to matriculate and take scholarship examinations, as well as to give the older children ideas for further studies when beyond school age.

The smaller children are given as much opportunity as possible to become deft with their fingers, ready of speech, eager to learn, and companionable with those around.

During the past year full use has been made of the "News Chronicle" installation of wireless. With a loud speaker in each ward it has been possible to choose the most suitable broadcast lessons and with the aid of the pamphlets published by the B.B.C., make good use of the lessons given. The use of the broadcast lessons widens the children's horizon beyond the Hospital and keeps them in contact with the outside world.

## THE COLLEGE

DURING the year 20 boys completed their training, of whom 5 were leather workers, 7 bootmakers, and 8 tailors.

In addition to technical training every effort is made to broaden the outlook on life of the College boys and many activities

are organised for this purpose. Many of these activities are spontaneous and are managed by a committee elected by the boys themselves. The College Magazine is written, typed, and duplicated without assistance, and has achieved a high literary standard. Every Thursday evening during the winter is set aside for the pictures. These are provided by a Kodascope machine, the films for which are hired. The choice of films is largely with the boys themselves. In this it is interesting to note that they choose topical, travel and industrial films rather than comedies, which are generally supposed to be most popular. The Sports Committee control the indoor as well as the outdoor games.

During the year a number of visits were paid to places and events of interest—an old Roman fort, Richboro Castle, the Aldershot Tattoo, the Zoo, a Leather Tannery, the British Industries Fair, and the annual Football Match between the London Banks and the Stock Exchange.

There is a flourishing St. John's Ambulance class which meets every Monday and Friday evening. During the year 12 boys passed the certificate examination. In spite of their infirmities they have performed stretcher drill and other duties connected with first aid work.

Another pleasing feature has been the extension of gardening. The gardens are cultivated during the boys' spare time, most boys having a plot of their own. The enthusiasm shown for this hobby may be due to the home conditions of many of the boys. Those coming from the more crowded towns have never had the opportunity of gardening before coming to Alton.

The Ampthill Prize, a cheque for £5, given by the Pro Minimis Lodge of Freemasons to the boy who has made best use of his three years here, was won by Douglas Hayward. Hayward was admitted first to the Wards here at the age of 8 years and passed to the College when he was 14. He was remarkably clever with his hands. He made a suitcase which was presented to H.R.H. The Duke of Kent, on the occasion of the Duke's Wedding. He was Captain of the College football and cricket teams before he left, and one of the most popular boys in the College.

The College Dramatic Society perform a series of plays during the winter term. The boys who cannot obtain parts on the stage assist in making the scenery, costumes, and properties. The performances are run by the boys without outside help.

## COLLEGE SCHOOL

In addition to the trade training an hour and a half school instruction is given daily. For convenience the school is divided into three sections. The top section is comprised of boys who have had elementary school instruction before the age of 14. Work in this division is largely commercial and similar to evening school work. The second section is for boys who have missed a large part of normal school time and require elementary school instruction. The third section is for those who have had little or no previous education.

At the March examinations of the Royal Society of Arts, the following successes were achieved :—

Arithmetic Stage 1—4 passes, 1 credit.

      "      " 2—1 pass.

English      " 1—1    " 1    "

      "      " 2—1    "

Bookkeeping " 1—4 passes, 1    "

# REPORT OF THE QUEEN ALEXANDRA LEAGUE OF SERVICE AND LOCAL ASSOCIATIONS

*From 1st April, 1936, to 31st March, 1937*

---

*President :*

H.R.H. PRINCESS ARTHUR OF CONNAUGHT.

*Vice-Presidents :*

H.R.H. PRINCESS ALICE COUNTESS OF ATHLONE, THE MARCHIONESS OF CARISBROOKE, THE MARCHIONESS OF TITCHFIELD, THE VISCOUNTESS BURNHAM, THE BARONESS RAVENSDALE, QUEEN AMELIE OF PORTUGAL, THE HON. MRS. FREDERICK LAWSON, MISS FLORENCE TRELOAR.

*Organising Secretary :*

MR. REGINALD M. WEEKS.

*Organising Secretaries (Travelling) :*

MR. CHAS. D. PENKETH.      MISS CECIL D. SLAUGHTER.

---

THE Trustees of the Treloar Cripples' Hospital are gratified to report that the income of the League during the past year has shown a welcome increase over the total of the previous year, and is equal to the average for the past four years.

This is a really splendid result, for the Trustees recognise the difficulties experienced by so many of our helpers, and are delighted that such loyal support has met with a gratifying result.

The outstanding event of the year was the League Visit to the Hospital on June 24th, 1936. A number of Local Secretaries and collectors, from all parts of England, together with their friends,

visited the Hospital, and were received by the Hon. Mrs. Frederick Lawson (Vice-President), who presided at the meeting. In glowing terms she recorded the appreciation of the Trustees of the achievements of the League, and said that to obtain such a result meant unselfish labour and the devotion of much time and thought.

After a talk given by Sir Henry Gauvain, in which he spoke of the developments of the work of the Hospital and the types of cases which are now being treated, the visitors were able to see the children in the new Hospital Buildings, which are so admirably adapted for the special work at Alton.

The Trustees desire to record again their gratitude for the loyal and generous support given from all parts of England and Wales. It is encouraging to secure this generous assistance, for it is fully recognised that the work of collecting calls for much patience, but it has as its reward the knowledge that the crippled children benefit greatly from this splendid help.

Grateful thanks are also due to the Mayors and Mayoresses of many Boroughs throughout the country who issue an appeal in their own district, and in this way secure most generous and welcome assistance. To all these kind friends the Trustees again desire to send their appreciation and cordial thanks.

It is gratifying to note the number of special efforts which are made in aid of the Hospital, proceeds of which help to swell the total of the local appeal. It would be impossible to recall all the assistance received in this way, but a selection is made of some of the help obtained in this direction.

**BEDFORD.**—Mrs. Brierley (Local Hon. Secretary and Treasurer) has, unfortunately, been unwell lately, and was therefore unable to arrange the Annual Sale. In place of this she held in her own house what she called a "Home Sale," which was generously supported, and for which we are most grateful. For many years our friends at Bedford have been very generous in the support sent to the Hospital, and we sincerely hope that Mrs. Brierley's health will very speedily be re-established.

**CHELMSFORD.**—We are once more grateful to our kind friend Mrs. Ballard for organising a Whist Drive, the proceeds of which were added to the collection made by Alderman Frederick Spalding, J.P. The long continued interest in the Hospital shown by our friends at Chelmsford is most gratefully appreciated.

CHINGFORD.—This Branch is one of the oldest in connection with the League, and has continued this year its successful labours. During the past twelve months a Whist Drive and a Sale of Work have produced a gratifying result. We are especially indebted to Mrs. Fish for her continued leadership, despite the anxiety with which she has been faced this year. It must be encouraging to her to realise the loyal support given by her Committee and the generous response made by our friends in this area.

EASTLEIGH.—Our friends at Eastleigh have done really magnificently during the year. Under the leadership of Mrs. Woodford (Local Hon. Secretary) a record cheque was sent. Mr. and Mrs. Morris-Wells organised a Dance in aid of the Hospital, which realised £100, and we are most grateful for this splendid help. In addition, Miss Moore again arranged a Dancing Display by her pupils, which was generously supported. We would like to convey to our friends at Eastleigh our gratitude for such splendid help.

ENFIELD.—Thanks to the great kindness of Mrs. Vandermin, an American Tea was held in November, 1936, which produced a record total. This is in addition to the proceeds of the annual appeal letter. We are very grateful to Mrs. Vandermin and to her friends for sending the largest total yet raised in Enfield.

GREAT ORMESBY.—Mrs. E. Kempson Brown, who issues the Annual Appeal in this district, also organised a concert for the Hospital, which despite the inclement weather was a marked success. We are most grateful for the help given to us in this way.

HERNE HILL.—This is another of our Senior Branches, and we gratefully appreciate the help given to us annually by Mrs. Dean. The subscriptions were well maintained, and the Annual Dance held for the Hospital produced an unusually large sum, and we value most cordially the help given from this Branch. We are glad to welcome as the new Secretary, Miss Moyra Dean, who is continuing the work which her mother started many years ago.

LEAMINGTON.—In addition to the very generous response received each year from the Mayor of Leamington's appeal, the High School for Girls have for many years contributed a generous sum each term, collected by the various forms, and subscriptions have also been received from the Kindergarten School.

NEATH.—Our sincere thanks are due to Mrs. H. P. Lloyd for the assistance she has given. In addition to her Annual Appeal, a series of Whist and Bridge Drives were held which she also organised. It is most gratifying to receive such kind help from South Wales.

PALMERS GREEN.—The splendid assistance sent year by year from Palmers Green is warmly appreciated, and our thanks are due to Mrs. Piper and the members of her Committee for the generous sum received during the past year. A series of Whist Drives and Dances have been organised, and the subscriptions and collections by the children have been well maintained, despite the many changes which have been taking place in the Local Committee. The really practical and deep interest taken by our friends in Palmers Green is much appreciated and valued.

PINNER.—This Branch, under the able leadership of Mrs. Wimbush, has kindly sent each year for the past nine years the sum of £110. The response to the Annual Appeal letter has been most generous, and we are grateful indeed to Mrs. Gray for having arranged a Bridge Tournament, which added considerably to the total for the year. We are happy to have such kind interest and generous support from our friends in Pinner.

RICHMOND (Yorks).—The Hospital is much indebted to Lady Serena James for the Annual Collection which she makes in this area, and also for her great kindness in opening her grounds to the public on behalf of the Hospital. We are most grateful to her for the help she has given.

RICKMANSWORTH.—A welcome increase to the funds of the Hospital has been received from Rickmansworth, where Mrs. Harvey, in addition to making the Annual Collection, was able to arrange a Whist Drive, the result of which enabled her to send a record sum.

SEAFORD.—The girls of Micklefield School, Seaford, deserve special thanks for continuing their support of the Hospital, for not only have they been able to send their promised annual contribution, but they have also increased materially the endowment of their cot. Mr. Weeks had the pleasure of speaking to the School, and found them keenly interested and very determined to do their utmost to maintain their support.

SPALDING.—In addition to the Annual Appeal, Miss Harvey (Local Hon. Secretary) arranged, through the kindness of the Head-mistress, a meeting at the Spalding High School for Girls, at which

Mr. Weeks spoke of the work of the Hospital. There was a large attendance, and much interest was shown. It is gratifying to receive such kind assistance from Spalding.

SWANSEA.—We are grateful to Mrs. Walter for the support she has sent annually from Swansea since 1913. Despite many difficulties she has been successful, in her area, in maintaining interest in the work of the Hospital.

WALLINGTON.—We are much indebted to Mrs. Graham for arranging a Sale, the proceeds of which were shared among various children's organisations. The sum allocated to our Hospital was a generous one, and, in addition, Mrs. Graham was able to send the usual help received from her annual appeal. We are very grateful to Dr. and Mrs. Graham for the help they give to us year by year.

WILLESDEN.—Our friends at Willesden were again unfortunate in that the weather compelled them to hold their Annual Sale in the Presbyterian Lecture Hall instead of in the gardens of Stonebridge Park, kindly lent by Mr. E. P. Taylor. The Sale was opened by Mrs. Victor Smith with a very helpful speech, and the proceeds of the effort reached a most gratifying sum. We are especially grateful to our kind friends who, despite the difficulties of the past years, have been so loyal in their support. It was a great pleasure to have Mr. and Mrs. Fifoot at this annual effort, for it was due to their assistance that this Branch was first started.

WOODFORD.—In Mrs. Mathieson (Local Hon. Secretary) the Hospital has a most devoted friend, whose support is always very welcome. Through a series of local efforts she has been able to send us a most welcome sum, which is very sincerely valued.

WORTHING.—Our warmest congratulations are due to the Worthing High School for Girls for the generous assistance received from yet another Treloar Day, which seems to make a climax to each year's work. The Upper School presented Euridides' "Iphigenia in Aulis," which was splendidly produced and well acted. The large audience was greatly impressed by the play and by the evidence of careful preparation. The various stalls and competitions by the different classes throughout the School were very well patronized, and the proceeds were quite equal to those of former years. The Hospital is greatly indebted to Miss Coast and to her staff and pupils for the splendid support given year by year to the Hospital. Mr. Weeks spoke at the evening performance, and also addressed the School the

following morning, and had the opportunity of assuring the girls of the thanks of the Trustees for all the School has done during the past twenty-five years.

YEOVIL.—In addition to the Annual Collection in Yeovil made by Mrs. Harold Bradford, Miss Wright and her pupils most kindly arranged a School Collection for the Hospital, the proceeds of which made a very welcome addition to the Funds. We are most grateful to the young people who helped to secure this additional help.

There is always an additional pleasure in welcoming the assistance given by the large number of schools and the help of young people in all parts of the country. We are glad to record the generous contribution received from Bedford Modern School, and we are much indebted to Rev. E. G. Potter, who is most assiduous in his efforts for the Hospital.

The Winchester County School has again sent through Miss Wright their annual contribution for the Hospital. This School is in close contact with the work at Alton, and has always been most generous in its support, which has been received without a break for twenty-two years.

Once again we are grateful to Miss Hains for the kind help received from Gardenhurst School, Burnham-on-Sea, and also to Miss James of Vyne-Stratton School, Basingstoke, for the assistance sent each term.

Other schools who have sent help year by year, and whose support is most warmly appreciated, are Bedale School, Petersfield, from whom we have received two contributions during the year, Bramscote School (Scarborough), Brigg Preparatory School, Brighton and Hove Grammar School, Chichester High School for Girls, Dover High School for Girls, Haberdashers Askes School (Hampstead), Heathfield School (Ascot), The High School for Girls (Nottingham), The High School for Girls (Uttoxeter), The High School for Girls (Wellington, Salop) Sleaford High School for Girls. Such support and interest is very much appreciated, and our thanks are due to all those who helped in securing such assistance.

In addition, a large number of schools have sent contributions direct to the lady who was making the local appeal in their area.

As the result of the generous response to the local Appeals, or from the proceeds of Fêtes, Sales, etc., the following Associations succeeded in raising £50 or more, viz. :—

Aldershot.	Derby.	Keighley.	St. Albans.
Alresford.	Dewsbury.	Kettering.	St. Annes-on-Sea.

*Vice-President.*

## RULES FOR ADMISSION TO HOSPITAL.

Application for admission must be made on a special form which will be supplied on request to the London Office.

Boys and girls crippled from any cause whatever and who would be likely to be benefited by treatment are admitted up to the age of 16 years. The term "crippled" may be widely interpreted. Priority is given to children crippled by tuberculous infections or deemed to be suffering from orthopædic conditions, but cases suffering from medical forms of crippling, as, for example, rheumatoid arthritis, the sequelae to rheumatic fever, and chronic diseases generally, who might be benefited by treatment, are eligible for admission if vacancies occur.

Should surgical treatment become necessary it is to be understood that such will be carried out under the direction of the Medical Officers.

Cases with signs of active tuberculous disease of the lungs are not eligible for admission.

Patients found eligible for admission will be registered, and in due course orders of admission will be sent.

Patients will not be admitted unless clean in their persons and habits.

Patients are admitted for any period up to two years which the Trustees deem advisable, at the end of which time all cases shall be examined and reported upon by a Visiting Member of the Medical Board. If thought desirable, the period may then be extended on the recommendation of the Medical Board.

Patients on admission will be tested as to their susceptibility to diphtheria and if susceptible will be immunised.

Patients will be treated either at Alton or at the Seaside Branch at Sandy Point, Hayling Island, as their condition indicates. Patients will always be admitted to and discharged from ALTON save in exceptional circumstances. Parents will at once be notified of the transference of children from one Branch to the other.

A Weekly Charge (payable in advance), the amount of which is settled from time to time by the Trustees, is made for children sent by parents, friends, or philanthropic societies supported by the public. The Trustees will give sympathetic consideration to any special case of need, and, if full enquiry warrants such a course, may receive a patient at a reduced rate or without charge.

For cases admitted through County Councils, Education Committees and other Local Authorities special rates are charged.

Parents and adult friends may visit patients between 2 and 3.30 p.m. on Saturdays and Sundays, and on Bank Holidays between 10.30 and 12 a.m., and 1.30 and 3.30 p.m., on presentation of visiting card, except during the months of January, February and March, when visiting is not permitted.

# RULES FOR ADMISSION TO THE COLLEGE.

---

- 1.—Application for admission must be made on a special form which will be supplied on request to the London Office.
- 2.—Candidates for admission must attend for a preliminary examination by the Medical Superintendent, which takes place by appointment, at the Farringdon Dispensary, Bartlett's Buildings, Holborn Circus, London, E.C. 1.
- 3.—Final decision as to admission rests in all cases with the Trustees of the College.
- 4.—Successful candidates for admission will be registered, and in due course orders of admission sent.
- 5.—Crippled boys, between the ages of fourteen and sixteen years, who would be likely to be benefited by technical training, are eligible for admission.
- 6.—The blind, the deaf and dumb or mentally deficient, or those without the full use of both hands, are ineligible.
- 7.—Candidates suffering from pulmonary tuberculosis, or from any condition which makes it undesirable that they should associate with other lads, are ineligible.
- 8.—Should medical or surgical treatment be required while in residence it is understood that such will be carried out under the direction of the Medical Officers.
- 9.—Candidates requiring surgical appliances or special surgical boots must obtain these before admission. They will be advised by the Medical Superintendent at the examination in London prior to admission, and instructed as to how these can be most economically procured. Renewal or repair of these instruments, when required, will be undertaken at lowest Hospital rates, which must be prepaid.
- 10.—Boys are trained at the College in leatherwork (bag-making and case-making), tailoring, and shoe-making. The selection of a trade for each lad is decided by the College authorities after admission. While undergoing training the general education of the lads receives special attention by means of classes designed to meet their individual requirements. The Syllabus is approved by the Board of Education.
- 11.—All boys come for a probationary period of three months. The full period of training is three years. Persistent bad conduct or uncleanliness, in person or habits, render a boy liable to expulsion.
- 12.—Candidates on admission must pay their railway fare to Alton and provide a sum to cover their return fare, which will be deposited in the Office for use when the candidate leaves at the end of his training.
- 13.—Each boy when admitted must bring: 2 pairs of boots; 1 pair of slippers; hair-brush and comb; tooth-brush. An initial charge of £7 (which may be reduced or increased according to variations in the cost of the articles) is made for an outfit supplied to each boy upon entering the College. This outfit consists of:—

2 Drill Suits	3 pairs of Pants.
Use of Serge Suit.	3 Vests.
1 Blue Serge Overcoat.	6 pairs of Socks.
2 Night Shirts.	2 Ties.
3 Day Shirts.	6 Handkerchiefs.
1 Jersey.	2 Caps.

Should boots be required during the stay of the boy at the College, these are supplied at cost price from the College workshops. Repairs to boots and clothing, etc., or any new article of outfit required, are also charged to boys in the College at cost price. Accounts are rendered monthly.
- 14.—The College is closed for a week or ten days at Easter and Christmas, and during the month of August. Boys going home must provide their return fare a week before the holidays commence. Those boys who do not go home must contribute towards their maintenance a sum at the discretion of the Trustees. This is usually fixed at 10/- per week, and must be paid in advance.
- 15.—Boys will be promoted as monitors (with special privileges), according to their good conduct and diligence. A bonus is given to boys for good conduct and diligence shown at their trade. This, in the case of successful boys, is usually sufficient to meet the cost of an outfit of tools when a boy has completed his training. Boys withdrawn before completion of training forfeit claim to bonus.
- 16.—Every effort will be made to place boys in situations on the expiration of training, but no guarantee to this effect can be given.

# FORM OF BEQUEST

---

I give and bequeath to the Lord Mayor Treloar Cripples' Hospital and College, to be applied in and towards carrying on the charitable objects of the Institution,

---

*(here describe gift, for instance, the sum of or amount of stock.)*

and I direct that the receipt of the Treasurer, for the time being, of the Institution, shall be a full and sufficient discharge for my Executors.

---

THE INSTITUTION IS DEPENDENT ON  
VOLUNTARY SUPPORT, AND FUNDS ARE  
URGENTLY NEEDED TO MAINTAIN  
IT IN FULL EFFICIENCY.

A COT may be named (with Name Tablet) in Perpetuity for £1,000  
During Lifetime of Donor for ...   ...   ...   ... £300  
Or by Annual Subscription of ...   ...   ...   ... £35

## IN MEMORIAM GIFTS

Many supporters of the Hospital, whilst not in a position to name a Cot, may feel disposed to associate in perpetuity the name of a relative or friend (very often a child) with the Institution.

In order to meet such cases, the Trustees have gladly arranged to accept gifts for investment in perpetuity, and in this manner the "In Memoriam" gift will always be associated with the Hospital, whilst steadily building up an endowment fund.

# INCOME TAX AND SUPER-TAX ON ANNUAL SUBSCRIPTION

Annual subscribers, by filling up the following form of agreement for seven years, enable the Hospital to recover income tax on their subscriptions, and can themselves deduct the amount of the subscription from their super-tax return.

I, .....

of .....

HEREBY COVENANT with LORD MAYOR TRELOAR CRIPPLES' HOSPITAL AND COLLEGE that for a period of seven years from the ..... day of ..... 193....

or during my life whichever period shall be shorter I will pay annually to the said Hospital such a sum as will after the deduction of income tax leave in the hands of the

Charity the net sum of £..... (..... (words) ) the

first of such annual payments to be made on the ..... day of ..... 193....

and the six subsequent annual payments to be made on the ..... day of .....  
in each of such subsequent years all such sums to be paid from my general fund of  
taxed income so that I shall receive no personal or private benefit in either of the  
said periods from the said sums or any part thereof.

IN WITNESS whereof I have hereunto set my hand and seal this  
day of ..... 193.....

SIGNED SEALED AND DELIVERED BY THE

said .....

In the presence of

Signature .....

Address .....

Occupation .....

L.S.

For example, if a contributor who now subscribes £10 per annum enters into an agreement in the above form, filling in the figure £10, the result will be:

- (a) the subscriber sends a cheque for £10, with a certificate that he has paid income tax at on the amount which, after deducting income tax, leaves £10 (i.e., with income tax at 5/- in the £, £13-6-8); the Hospital can supply forms of certificate if desired;
- (b) the Hospital recovers the income tax from Somerset House;
- (c) the contributor appears as a subscriber of £13-6-8;
- (d) the contributor can deduct £13-6-8 from his return for super-tax.

The Hospital would be pleased to give further information if desired. It is sometimes possible to furnish alternative forms of agreement to meet special circumstances.
